PROFESSIONAL SUMMARY

Fresher Python Backend Developer and ML Engineer (BCA 2026) with proven experience building and deploying full-stack AI web applications using Python, FastAPI, and REST API integration. Skilled in end-to-end data pipeline construction, Scikit-learn model training, model deployment on cloud platforms (Render), and connecting ML backends to responsive frontends. Writes clean, scalable, object-oriented code with a strong foundation in backend development and full-stack engineering.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML5, CSS3, SQL

Frameworks & Libraries: FastAPI, Flask, React.js, Pandas, NumPy, Scikit-learn, Chart.js

Tools & Platforms: Git, GitHub, Docker, Jupyter Notebook, VS Code, Postman, Render, GitHub Pages, UptimeRobot

Concepts: REST API Design, API Integration, Model Deployment, Data Pipeline, Machine Learning, Regression & Classification, EDA, Data Preprocessing, Full-Stack Development, Agile Collaboration

PROJECTS

DiagnoWeb – AI-Powered Diabetes Risk Predictor [GitHub](#) | [Live Demo](#) | 2026

Python · FastAPI · Scikit-learn · Pandas · NumPy · HTML · CSS · JavaScript · Chart.js · Render

- Engineered a full-stack AI web application with a FastAPI backend serving a trained Scikit-learn classification model; designed RESTful prediction endpoints consumed by a responsive frontend via structured API integration.
- Built an end-to-end data pipeline — data preprocessing, feature engineering, model training and evaluation using Pandas and NumPy — achieving reliable diabetes risk classification with Scikit-learn.
- Implemented interactive Chart.js visualisations for risk scores and prediction confidence, automated PDF report generation, and deployed the complete application on Render for live public access.

InsureIQ – AI-Based Insurance Cost Estimator [GitHub](#) | [Live Demo](#) | 2026

Python · FastAPI · Scikit-learn · Pandas · HTML · CSS · JavaScript · Render · GitHub Pages · UptimeRobot

- Developed and deployed a full-stack ML web application for real-time insurance cost estimation; built a FastAPI backend integrated with a trained Scikit-learn regression model connected to the frontend via REST API.
- Engineered BMI calculation, city-tier regional prediction logic, prediction history tracking, and interactive result charts; deployed backend on Render and frontend via GitHub Pages with UptimeRobot monitoring to reduce cold-start latency.

Cohort – Unified Professional Communication Platform (Team Project) [GitHub](#) | Jan 2025 – Apr 2026

React · Node.js · MongoDB · Socket.IO · REST API

- Built and maintained reusable React.js UI components and integrated Node.js backend REST API endpoints into the frontend, gaining end-to-end full-stack development experience across the complete data flow.
- Participated in feature testing, UI bug fixes, peer code reviews, and technical documentation across the full software development lifecycle (SDLC) in an Agile team environment.

EDUCATION

Bachelor of Computer Applications (BCA) | 2023 – 2026 | Sardar Vallabhbhai Global University, Ahmedabad | CGPA: 7.8 / 10

Relevant Coursework: Python Programming, Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Technologies, Data Analysis & Machine Learning Fundamentals

LANGUAGES

English (Professional) | Gujarati (Native) | Hindi (Fluent)
