PROFESSIONAL SUMMARY

Python Backend Developer and Machine Learning Engineer (BCA, 2026) with hands-on experience building and deploying full-stack AI applications using Python, FastAPI, and REST APIs. Skilled in end-to-end data pipelines — data cleaning, EDA, feature engineering, and model development/evaluation with Scikit-learn, Pandas, and NumPy — through independent projects and a Machine Learning Developer internship. Comfortable connecting ML models to production-style backends and deploying them to the cloud. Strong problem-solving foundation in data structures, algorithms, and object-oriented programming, with a focus on writing clean, maintainable code.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, HTML5, CSS3

Machine Learning & Data Science: Scikit-learn, Regression, Classification, Model Evaluation, EDA, Feature Engineering, Data Preprocessing, Pandas, NumPy

Backend & Frameworks: FastAPI, Flask, REST API Design, API Integration

Frontend: React.js, JavaScript, Chart.js

Developer Tools: Git, GitHub, Docker, Postman, Jupyter Notebook, VS Code

Deployment & Monitoring: Render, GitHub Pages, UptimeRobot

Core CS Concepts: Data Structures, Algorithms, Object-Oriented Programming, SDLC, Agile Collaboration

PROFESSIONAL EXPERIENCE

Machine Learning Developer Intern — Cognetix Global Technology LLP (Remote)

May 2026 – June 2026

- Worked on real-world AI/ML tasks spanning data preprocessing, exploratory data analysis, and feature engineering using Python, Pandas, and NumPy.
- Built and evaluated machine learning models using Scikit-learn, applying regression and classification techniques for predictive modeling.
- Assisted in testing and debugging model pipelines, documenting workflows and results for reproducibility.
- Collaborated using Git/GitHub for version control and code review as part of a distributed development workflow.

PROJECTS

DiagnoWeb – AI-Powered Diabetes Risk Predictor

Python, FastAPI, Scikit-learn, Pandas, NumPy, JavaScript, Chart.js, Render | GitHub · Live Demo

- Built a full-stack AI web application with a FastAPI backend serving a trained Scikit-learn classification model through RESTful prediction endpoints.
- Designed an end-to-end data pipeline — preprocessing, feature engineering, and model training/evaluation — for diabetes risk classification.
- Added Chart.js visualizations for risk scores and prediction confidence, automated PDF report generation, and deployed the application on Render for public access.

InsureIQ – AI-Based Insurance Cost Estimator

Python, FastAPI, Scikit-learn, Pandas, JavaScript, Render, GitHub Pages, UptimeRobot | GitHub · Live Demo

- Developed a full-stack ML web application for real-time insurance cost estimation, integrating a FastAPI backend with a trained Scikit-learn regression model via REST API.
- Implemented BMI calculation and city-tier regional prediction logic, along with prediction history tracking and interactive result charts.
- Deployed the backend on Render and frontend on GitHub Pages, using UptimeRobot to reduce cold-start latency.

Cohort – Unified Professional Communication Platform (Team Project)

React, Node.js, MongoDB, Socket.IO, REST API | GitHub

- Built and maintained reusable React.js UI components and integrated Node.js REST API endpoints into the frontend, gaining full-stack experience across the data flow.
- Contributed to feature testing, UI bug fixes, peer code reviews, and technical documentation within an Agile SDLC process.

EDUCATION

Bachelor of Computer Applications (BCA) — Sardar Vallabhbhai Global University, Ahmedabad

2023 – 2026 | CGPA: 7.8 / 10

Relevant Coursework: Python Programming, Data Structures & Algorithms, Database Management Systems, Software Engineering, Web Technologies, Data Analysis & Machine Learning Fundamentals

LANGUAGES

English (Professional) | Gujarati (Native) | Hindi (Fluent)
