PROFESSIONAL SUMMARY

Final-year BCA student with practical experience in Python, web development, and data analysis. Contributed to a team-built real-time communication platform and independently developed an AI-powered diabetes risk prediction web app using FastAPI and machine learning. Seeking an entry-level role where I can apply and grow my skills.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML5, CSS3, SQL

Frameworks & Libraries: FastAPI, Flask, React.js, Pandas, NumPy, Scikit-learn

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Postman, Render (deployment)

Concepts: REST APIs, Machine Learning basics, EDA, Data Preprocessing

PROJECTS

DiagnoWeb – AI-Powered Diabetes Risk Predictor

2025

Python · FastAPI · Scikit-learn · Pandas · NumPy · HTML · CSS · JavaScript · Chart.js | [GitHub](#)

- Built the complete frontend UI with HTML, CSS, and JavaScript; designed a responsive layout with interactive Chart.js visualisations for risk scores and confidence output.
- Integrated a FastAPI backend that serves the trained ML model; connected prediction endpoints to the frontend using REST API calls.
- Performed dataset preprocessing and feature engineering using Pandas and NumPy; trained and evaluated a classification model with Scikit-learn to predict diabetes risk.
- Added PDF report generation so users can download their prediction results; deployed the full application on Render.

Cohort – Unified Professional Communication Platform (Team Project)

Jan 2025 – Apr 2026

React · Node.js · MongoDB · Socket.IO · REST API | *Final Year Project* | [GitHub](#)

- Contributed to frontend development using React.js — built and updated UI components, pages, and layouts as part of a collaborative team.
- Assisted with integrating REST API endpoints from the Node.js backend into the React frontend, gaining practical exposure to full-stack data flow.
- Participated in testing features, fixing UI bugs, and writing documentation throughout the development lifecycle.
- Collaborated with teammates on feature planning and code reviews; the backend, authentication, and database design were primarily handled by other team members.

Exploratory Data Analysis & ML Pipeline (Academic Project)

2024

Python · Pandas · NumPy · Scikit-learn · Matplotlib · Seaborn

- Performed end-to-end EDA on a structured dataset — handled missing values, outlier detection, and basic feature engineering.
- Built and compared supervised learning models (Linear Regression, Logistic Regression, Decision Tree) using Scikit-learn and visualised results with Matplotlib and Seaborn.

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2026

Sardar Vallabhbhai Global University, Ahmedabad | CGPA: 7.8 / 10

Relevant Coursework: Python Programming, Data Structures & Algorithms, DBMS, Software Engineering, Web Technologies, Data Analysis & ML Fundamentals

LANGUAGES

English (Professional) | Gujarati (Native) | Hindi (Fluent)
